We need technology!

Have you ever learned how to properly and most efficiently use modern technology in school? Probably not! That's an important issue, though. Especially right now when technology is taking over our daily lives, it is necessary to teach all students how to handle it appropriately.

Our daily use of technology begins when we wake up and ends only when we go to sleep again. Without the technological progress we have achieved by now, our day-to-day lives would be significantly different. For example, we use our smartphones an average of 1,500 times a week, and let's be honest, we all use the internet and social media daily!

It should therefore be the highest priority for schools to integrate modern technology into classes as soon as possible. We ought not to underestimate the importance of this! Students need to learn about cyber-bullying, the dark net and hacking, but also about technological progress, how technological devices can help us every day and how to repair them.

In order to implement technology in everyday school life, we need to show the government what we really want. That we don't want the military's budget to grow every year and the one for our educational system to shrink! We have to stand up to the government and tell them peacefully that we want to see major improvements to our education!

Technology is very important in our society. That's why it is important for us to learn all about it!
